I. Create a conflict and solve the conflict

The screenshot shows the VS Code interface with a file conflict in `test2.js`. The conflict is between the `HEAD (Current Change)` and the `user (Incoming Change)`. The conflict is resolved by merging the changes from both branches.

The conflict resolution shows the following changes:

- Line 1: `console.log("This is test 2");` (Accepted from HEAD)
- Line 2: `<<<<<< HEAD (Current Change)`
- Line 3: `console.log("This is test 2 - master line 2");` (Accepted from HEAD)
- Line 4: `=====`
- Line 5: `console.log("This is test 2 - user line 2");` (Accepted from user)
- Line 6: `>>>>>> user (Incoming Change)`
- Line 7: (Empty line)

The resolved file `test2.js` shows the following content:

```

1 console.log("This is test 2");
2 console.log("This is test 2 - for master and user line 2");

```

The terminal output shows the command `git merge user` and the message "Already up to date."

14. Undo changes from a certain commit `git revert`

```

PS C:\Users\barni\Documents\GitHub\Asynchronous\Lab1> git add test2.js
